Thesis Machines are now very justly considered to be the Lorent in ase, having the advantage of all others in the simplicity of the ronstruction, the speed and beauty of their work, and the great strength of their seam. Unlike any others in use, they form a seam with two continuous threads from ordinary spools of cotton, sits or lines—making a knot at every statch which prevents the work from ripping under any circumstances whalever.

The first and highest premiums have been awarded to these Machines at all the leading Fairs throughout this country and Europe, and the inventor now rejoices in the more substantial reward of the largest paironage ever bestowed upon any Sewing Machine in Europe or America.

They are of the highest finish, and of every variety of size and style, and adapted to all the wants of the Sewing community.
